**NEWS RELEASE**  
**February 14, 2007**

## **POWERLITE™** *Announces improved stud terminations*

As part of our ongoing initiative to continually improve the PowerLite PBO product, we have redesigned our studs to increase the overall appearance of our product. We partnered with Hayn Enterprises to engineer and build new improved studs.

Hayn is a recognized leader in marine hardware especially threaded stainless terminations. Our engineers worked with their team to design a stud that is compatible with our system, but with a non-threaded area above the coupler and a machined flat to grip the stud during tuning. These studs have the same high quality materials and craftsmanship that are inherent in all of Hayn's products.

These studs will be standard on all product manufactured after February 1, 2007. However, we retain the flexibility to custom produce longer studs to meet some specialty turnbuckles, thus maintaining the necessary flexibility to retrofit most existing boats.

Call us for a free sample pigtail with one of the newly designed studs.

As 2007 unfolds we look forward to many other new and exciting things for our PowerLite rigging.
